FINANCIAL ANALYSIS PROJECT:

We have 2 tables (i.e. csv files)

- customers
- finance_transactions.

Customers

customer_id *
gender
date_of_birth
city
State
Occupation
customer_segment
annual_income
Join_date
Customer_name.

finance_transactions:

transaction_id
transaction_date
account_id
customer_id 1
transaction_type
Channel
merchant_category
Amount
fee_amount
tax_amount
Currency
transaction_status
is_fraud
risk_score
reference_no

Step ②:

→ Now let's create a table called 'CALENDARTABLE'

CALENDARTABLE =

CALENDAR (MIN (finance_transactions [transaction_date]),
MAX (finance_transactions [transaction_date]))

Create Year column in 'CALENDARTABLE'

Year = YEAR (CALENDARTABLE [Date])

Also create month column that shows the month

Month = FORMAT (CALENDARTABLE [Date], "MMM")

Step ③: Now make a relationship b/w fact & calendar table.

by using finance_transactions [transaction_date] & CALENDARTABLE [Date]

→ This is the Dashboard that we will design

Step (4): Adjust The canvas settings
 $h = 950\text{px}$, $w = 1800\text{px}$, alignment = middle.

→ And also take 2 Randed Rectangular boxes & make a vertical box with color = 091E53 and place it to the left & also similar Rectangular box with Right White color to the remaining part of canvas

→ add logo

→ Create a measure for title & add it to a card.

Dashboard Title = "Financial Analysis"

Step (5): KPI Requirement

a) Total Amount (KPI 1)

Total Amount = SUM(finance-transactions[Amount])

Py Amount:

Py Amount = CALCULATE ([Total Amount],
 FILTER (CALENDAR (DATE (2024, 1, 1), 2024, 12, 31)))

Py Amount

SAME PERIOD LAST YEAR

YoY Amount:

$$\text{YoY Amount} = [\text{Total Amount}] - [\text{PY Amount}]$$

$$\text{YoY \% Amount} = \text{DIVIDE} ([\text{YoY Amount}], [\text{PY Amount}])$$

b) Total Transactions (KPI 2)

$$\text{Total Transactions} = \text{DISTINCT COUNT} (\text{france-transactions} [\text{transaction_id}])$$

$$\text{PY Transactions} = \text{CALCULATE} ([\text{Total Transactions}], \\ \text{SPY} (\text{CALENDARTABLE} [\text{Date}]))$$

$$\text{YoY Transactions} = [\text{Total Transactions}] - [\text{PY Transactions}]$$

$$\text{YoY \% Transactions} = \text{DIVIDE} ([\text{YoY Transactions}], [\text{PY Transactions}])$$

c) Avg Transaction Value:

$$\text{Avg Transaction} = \text{AVERAGE} (\text{france-transactions} [\text{Amount}])$$

$$\text{PY Avg Transaction} = \text{CALCULATE} ([\text{Avg Transaction}], \\ \text{SPY} (\text{CALENDARTABLE} [\text{Date}]))$$

$$\text{YoY Avg Transaction} = [\text{Avg Transaction}] - [\text{PY Avg Transaction}]$$

$$\text{YoY \% Avg Transaction} = \text{DIVIDE} ([\text{YoY Avg Transaction}], \\ [\text{PY Avg Transaction}])$$

d) Total fees

total fees collected from transactions

→ Show 1%

✓

Total fees = SUM (finance-transactions [fee-amount])

PY fees = CALCULATE ([Total fees],
SPY (calendar table [date]))

YoY fees = [Total fees] - [PY fees]

YoY % fees = DIVIDE ([YoY fees], [PY fees])

e) Total Tax:

→ Show total tax generated from all transactions.

Total Tax = SUM (finance-transactions [tax-amount])

PY Total Tax = CALCULATE ([Total Tax],
SPY (calendar table [date]))

YoY Tax = [Total Tax] - [PY Total Tax]

YoY % Tax = DIVIDE (YoY Tax, [PY Total Tax])

→ Add these KPIs to the Dashboard & add respective image to

each.

→

Financial Analysis				
Dashboard Title				
Total Amount ₹ 45.32M -1.18% vs Previous Year	Total Transactions 5K 0.40% vs Previous Year	Avg Transactions ₹ 9.08K -1.57% vs Previous Year	Total Fees ₹ 75.44K -7.17% vs Previous Year	Total Tax ₹ 13.57K 7.14% vs Previous year

→ We can add the comparison under each KPI WRT PY under 'Reference labels' section. 'vs Previous Year' should be added under reference labels.

by enabling 'Detail' subsection under 'Report'

Step ⑥: As you can see in the dropdowns present in left side Rectangle box, There is a dropdown called 'Dynamic Measure' from where we can select diff measures. To get that we should add a 'parameter'

Modeling → New parameter → field → give name & select the measure.

→ Keep this under Year Slicer.

Step ⑦: Total Amount by month:

→ Take a Area chart

X axis = Month

Y axis = Dynamic Metric

→ Now when we see the chart, we will not get months in the order from Jan to December. For this we need to add a column in calendar table to get Month Number.

Month No = MONTH ('calendar Table' [Date])

→ After adding 'Month No'

↓
Select 'Month' column

↓
in 'column Tool' & Sort by column = 'Month No'

Q12

Sort the Area chart by 'Month', & sort by ASC

Step 8: Total Amount by transaction status

→ We compare transaction amounts based on transaction status.

→ Donut chart

Legend = transaction status

Value = Total Amount

Step 9: Total Amount by Customer Segment

Stacked bar chart

X-axis = Dynamic metric

Y-axis = Customer segment

Step 10: Total Amount by state

Step 11: Transaction type analysis

add

Step 11:

Stacked bar chart
X-axis = Dynamic metric
Y-axis = State

take a table & use
transaction type
Total Amount
Total fee
Total Transactions
Total tax

Step 12: Total Amount by Gender:

Donut chart
legend - Gender
Value = Dynamic Metric

Step 13:

① Duplicate the created dashboard & remove all the charts except KPI's

② Add a new table & add below columns:
tx-id, Customer-name, tx-date, tx-type, tx status,
gender, Customer segment, State, Total Amount, Total fee,
Total tax
